Assessment of Corrosion Education National Research Council,Division on Engineering and Physical Sciences,National Materials Advisory Board,Committee on Assessing Corrosion Education,2009-03-12 The threat from the degradation of materials in the engineered products that drive our economy, keep our citizenry healthy, and keep us safe from terrorism and belligerent threats has been well documented over the years. And yet little effort appears to have been made to apply the nation's engineering community to developing a better understanding of corrosion and the mitigation of its effects. The engineering workforce must have a solid understanding of the physical and chemical bases of corrosion, as well as an understanding of the engineering issues surrounding corrosion and corrosion abatement. Nonetheless, corrosion engineering is not a required course in the curriculum of most bachelor degree programs in MSE and related engineering fields, and in many programs, the subject is not even available. As a result, most bachelor-level graduates of materials- and design-related programs have an inadequate background in corrosion engineering principles and practices. To combat this problem, the book makes a number of short- and long-term recommendations to industry and government agencies, educational institutions, and communities to increase education and awareness, and ultimately give the incoming workforce the knowledge they need.

Proceedings of the Materials Forum 2007 National Research Council,Division on Engineering and Physical Sciences,National Materials Advisory Board,Corrosion Education Workshop Organizing Panel,2007-06-29 The U.S. industrial complex and its associated infrastructure are essential to the nation's quality of life, its industrial productivity, international competitiveness, and security. Each component of the infrastructure-such as highways, airports, water supply, waste treatment, energy supply, and power generation-represents a complex system requiring significant investment. Within that infrastructure both the private and government sectors have equipment and facilities that are subject to degradation by corrosion, which significantly reduces the lifetime, reliability, and functionality of structures and equipment, while also threatening human safety. The direct costs of corrosion to the U.S. economy represent 3.2 percent of the gross domestic product (GDP), and the total costs to society can be twice that or greater. Opportunities for savings through improved

corrosion control exist in every economic sector. The workshop, Corrosion Education for the 21st Century, brought together corrosion specialists, leaders in materials and engineering education, government officials, and other interested parties. The workshop was also attended by members of NRC's Committee on Assessing Corrosion Education, who are carrying out a study on this topic. The workshop panelists and speakers were asked to give their personal perspectives on whether corrosion abatement is adequately addressed in our nation's engineering curricula and, if not, what issues need to be addressed to develop a comprehensive corrosion curriculum in undergraduate engineering. This proceedings consists of extended abstracts from the workshop's speakers that reflect their personal views as presented to the meeting. Proceedings of the Materials Forum 2007: Corrosion Education for the 21st Century summarizes this form.

Handbook of Engineering Practice of Materials and Corrosion Jung-Chul (Thomas) Eun,2020-09-04 This handbook is an in-depth guide to the practical aspects of materials and corrosion engineering in the energy and chemical industries. The book covers materials, corrosion, welding, heat treatment, coating, test and inspection, and mechanical design and integrity. A central focus is placed on industrial requirements, including codes, standards, regulations, and specifications that practicing material and corrosion engineers and technicians face in all roles and in all areas of responsibility. The comprehensive resource provides expert guidance on general corrosion mechanisms and recommends materials for the control and prevention of corrosion damage, and offers readers industry-tested best practices, rationales, and case studies.

Corrosion and Its Control H. VanDroffelaar,J. T. N. Atkinson,1994-12-31 A text that emphasizes the engineering aspects of corrosion and its control in ways helpful to practicing engineers, based on notes used by the authors for an advanced undergraduate engineering course at Queen's U., Kingston, Ontario. The Guide to National Professional Certification Programs Philip M. Harris,2001 The job market continues to

change. Highly skilled and specialized workers are in demand. Traditional education cannot meet all the needs to create specialty skill workers. Certification provides up-to-date training and development while promoting individual or professional skills and knowledge in a focused manner. Certification as a way of continuing professional education can also be more cost effective.

Corrosion Basics Pierre R Roberge,2018-03-22 This book provides general coverage of the wide field of corrosion control. It is designed to help readers being initiated into corrosion work and presents each corrosion process or control procedure in the most basic terms. Since the first edition was published in 1970, there have been major advances and changes in the technologies used to combat corrosion damage. The best techniques available for detecting corrosion, determining the corrosion resistance of a material, or evaluating the efficacy of a control procedure serve as daily tools for attacking the problems faced by thousands of persons engaged in corrosion work. This book will foster a better appreciation for these procedures. As with the first and second editions of *Corrosion Basics: An Introduction*, this third edition, also authored by Pierre R. Roberge, is intended to convey the scope of the field of corrosion prevention and control. It is important to realize the extent of the effort being made today in analyzing and combating corrosion. Much of the experience and many of the workable solutions developed in one area of corrosion work can be used to improve the control procedures of another area. While most people work in only one area of this total discipline, there is always the possibility that a shift in responsibilities or interest brings one to work in a completely different area of corrosion prevention and control.

Corrosion and Asset Integrity Management for Upstream Installations in the Oil/Gas Industry Carlos Alberto Palacios,2016-11-16 This book tells the thirty-year story of a corrosion/integrity engineer's life experiences through Upstream Installations in the Oil and Gas Industry, corrosion and integrity issues, the manifestations of various forms of corrosion, considerations for assessing corrosion rates, and the application of available mitigation techniques. The installations that are covered in this journey include downhole equipment; wellheads; flowlines (well lines); gathering lines; flow stations (primary separation stations); gas, oil and water treatment facilities; well injection; and ends describing a Corrosion and Asset Integrity Management (CAIMAN) System.
